

# 7,716 lbs

rated anti-slip trench cover  
for pedestrian & car access.

**Oxford**  
WE'VE GOT IT COVERED

## The Anti-Slip Trench Cover for Safer Access

Installed in minutes without heavy plant  
or machinery, keeping driveways and domestic  
access routes safely open during temporary works.

No Fixings  
Required

2 Person  
Installation

Vehicle Load  
Capacity

Low Noise,  
High Stability

Max Trench  
Width 35"

fixing system

## Product in Action

### Problem

During utility and street works, trenches disrupt roads, footpaths, and access routes. Traditional steel plates are heavy, noisy, difficult to install, and often require machinery, slowing progress and increasing labour costs. A safer, lighter, and more efficient alternative is needed to minimise disruption and keep projects moving.

### Risk

Open trenches and excavations create serious safety hazards for pedestrians, cyclists, and vehicles. Poorly secured or improvised coverings can shift, slip, or fail under load, leading to accidents, site delays, and potential liability. Maintaining safe access without compromising efficiency is critical on any worksite.

### Solution

The LowPro® 15/10 Trench Cover System is a lightweight, high-strength trench cover that delivers safe, compliant access in minutes. Designed for manual installation, it eliminates the need for lifting equipment while providing exceptional load-bearing performance. Its anti-slip surface and secure fixing system ensure stability in all conditions, while its high-visibility design enhances on-site safety. Reusable and durable, it reduces waste and delivers long-term cost savings.
